Portfolio

Professional Summary

Motivated and detail-oriented Full Stack Developer with a strong foundation in modern web development technologies including React.js, Next.js, Node.js, JavaScript, TypeScript, and Python. Passionate about building responsive, scalable, and user-focused web applications with clean and maintainable code. Experienced in developing personal and freelance projects, integrating REST APIs, and learning new technologies quickly in fast-paced environments.

Technical Skills

Languages	JavaScript, TypeScript, Python
Frontend	React.js, Next.js, HTML5, CSS3, Tailwind CSS
Backend	Node.js, Express.js, Django, REST API design & development
Databases	MongoDB, MySQL
DevOps & Tools	Git, GitHub, Vercel

Experience

Freelance Full-Stack Developer <i>Self-Employed</i>	<i>2024 – Present</i> <i>Remote</i>
---	--

- Delivered **Bilby**, a production-grade offline POS and billing mobile application — sole developer responsible for architecture design, UI development, API integration, and Android/iOS release builds.
- Translated client requirements into technical specifications and shipped a fully functional product on schedule with zero critical post-launch issues.

Projects

Bilby — Offline POS & Billing App <i>Tech Stack: Flutter · Dart · Hive</i>	<i>2024</i>
--	-------------

- Architected an offline-first cross-platform POS system supporting product catalog management, barcode scanning, cart operations, and Bluetooth thermal receipt printing.
- Wired `flutter_bloc` for unidirectional, predictable state management and `get_it` for service-locator dependency injection across all feature modules.
- Leveraged **Hive** as the embedded NoSQL store for lightning-fast offline read/write operations, eliminating any dependency on network connectivity.
- Shipped hardware integrations — camera-based barcode recognition via mobile scanner and Bluetooth thermal printer communication — for seamless checkout workflows.

Menter AI — AI Assistant Web App

2024

Tech Stack: Python · Django · SQLite · OpenAI API · D-ID API

- Engineered a Django web application offering AI-powered idea generation, smart content creation, and task automation through a real-time conversational interface.
- Connected multiple AI providers — OpenAI, Hugging Face, DeepAI — evaluating free-tier constraints and optimising request strategies for reliability and cost efficiency.
- Structured the codebase as a multi-app Django project, isolating user management, media handling, and payment flows into independent, reusable modules.
- Secured API credentials through environment-variable configuration and integrated **D-ID API** for dynamic AI avatar generation within the assistant interface.

Legacy — AI Portfolio Builder

2025

Tech Stack: Next.js · TypeScript · Three.js · Anime.js · Tailwind CSS

[Live Demo](#)

- Built a full-featured SaaS portfolio construction platform offering **7 distinct premium design templates** — spanning Swiss minimalism, glassmorphism, bento grids, HUD interfaces, neo-brutalism, aurora liquid, and an immersive Three.js 3D environment.
- Engineered a zero lock-in export system that generates **pure, dependency-free HTML/JS source code**, allowing users to own and self-host their portfolio indefinitely without platform dependency.
- Integrated **Three.js** with interactive particle physics and scroll-depth-driven camera movements for the Dimension 3D template, delivering cinematic in-browser 3D experiences.
- Wired **Anime.js** for fluid entrance animations, elastic motion effects, and scroll-triggered sequences across all template variants, achieving a premium motion design language.
- Applied automated schema metadata and semantic HTML structure for **SEO optimisation**, ensuring portfolios are discoverable and search-engine performant out of the box.

Datie — Community Dating App

2025

Tech Stack: Next.js · Node.js · MongoDB · Express.js · Anime.js

- Designed and developed a **full-stack MERN dating platform** tailored for the Malayali community, featuring district-based profile discovery and culturally contextualised matching.
- Implemented a **cinematic UI** with Anime.js-powered transitions, scroll-driven reveals, and immersive entrance animations that deliver a premium app-like feel in the browser.
- Architected a **RESTful API** with Node.js and Express.js handling user authentication, profile management, and match-discovery endpoints backed by a MongoDB document store.
- Built a **geolocation-aware discovery system** enabling district-level filtering so users can discover and connect with people from their own region.

Education

Bachelor of Computer Applications (BCA)

Kannur University

2023 – 2026

Kannur, Kerala

Higher Secondary Education (Plus Two) — Computer Science

Sacred Heart Higher Secondary School, Payyavoor

2021 – 2023

Kerala
