

Full Stack Developer

Kannur, Kerala

Summary

Results-driven full-stack developer experienced in designing, building, and shipping scalable web and mobile applications. Proficient across the entire development lifecycle — from requirement analysis and UI/UX design to REST API development, database integration, and production deployment. Strong command of component-based frontend architecture, state management patterns, and offline-first mobile development. Adept at writing clean, readable code and delivering client projects independently under real-world constraints.

Technical Skills

Languages	JavaScript, TypeScript, Dart, Python
Frontend	React.js, Next.js, HTML5, CSS3, Tailwind CSS
Mobile	Flutter, Dart — cross-platform iOS & Android development
Backend	Node.js, Express.js, Django, REST API design & development
Databases	MongoDB, MySQL, SQLite, Hive (NoSQL)
DevOps & Tools	Git, GitHub, Docker, Vercel, CI/CD workflows

Experience

Freelance Full-Stack Developer	2024 – Present
Self-Employed	Remote
- Delivered Bilby, a production-grade offline POS and billing mobile application — sole developer responsible for architecture design, UI development, API integration, and Android/iOS release builds. - Translated client requirements into technical specifications and shipped a fully functional product on schedule with zero critical post-launch issues.	

Projects

Bilby — Offline POS & Billing App Flutter · Dart · Hive · BLoC · GoRouter · GetIt Bilby	2024
- Architected an offline-first cross-platform POS system supporting product catalog management, barcode scanning, cart operations, and Bluetooth thermal receipt printing. - Wired <code>flutter_bloc</code> for unidirectional, predictable state management and <code>get_it</code> for service-locator dependency injection across all feature modules. - Leveraged <code>Hive</code> as the embedded NoSQL store for lightning-fast offline read/write operations, eliminating any dependency on network connectivity. - Shipped hardware integrations — camera-based barcode recognition via <code>mobile_scanner</code> and Bluetooth thermal printer communication — for seamless checkout workflows.	

- Engineered a Django web application offering AI-powered idea generation, smart content creation, and task automation through a real-time conversational interface.
- Connected multiple AI providers — OpenAI, Hugging Face, DeepAI — evaluating free-tier constraints and optimizing request strategies for reliability and cost efficiency.
- Structured the codebase as a multi-app Django project, isolating user management, media handling, and payment flows into independent, reusable modules.
- Secured API credentials through environment-variable configuration and integrated D-ID API for dynamic AI avatar generation within the assistant interface.

Education

Bachelor of Computer Applications (BCA) <i>Kannur University</i>	<i>2023 – 2026</i> <i>Kannur, Kerala</i>
Higher Secondary Education (Plus Two) — Computer Science <i>Sacred Heart Higher Secondary School, Payyavoor</i>	<i>2021 – 2023</i> <i>Kerala</i>
